

Five Medical Laboratory Students Selected for Nationwide API Scholarships

Five students out of more than 300 nationwide applicants were awarded scholarships from the American Proficiency Institute (API) this year. The API scholarship program enters its 11th year with over 50 students receiving funds to further their medical laboratory science education.

“The enthusiasm these students have for the science behind the clinical laboratory is clear,” remarked Daniel C. Edson, President of API. “From an intrigue with genetics to culturing reindeer samples for enteric pathogens, this year’s scholarship winners have a variety of interests and experiences.”

API awarded \$2,000 scholarships to: Courtney Bennetts, a senior at University of Alaska at Anchorage; Eunice Hansen, a senior at Andrews University; Alyssa Jonasen, a senior at Montana State University at Bozeman; Carly McKenzie, a senior at Saginaw Valley State University; and Joanna Miranda, a senior at Texas State University.

“API scholarships aim to support students driving the future of the laboratory profession,” added Edson.
